POLYAI

The Platform for Conversational AI

Machine learning is the lifeblood of virtual personal assistants. Today, only the tech giants have the AI arsenal to build good voice-based experiences. At PolyAI, we are developing a machine learning platform which will make conversational app design as simple as building a website.

If you would like to hear more, come to our tutorial on *Deep Learning for Conversational AI*, and visit our NAACL booth.

Our team has been publishing at *ACL conferences for many years. With PolyAI, we are taking our research prototypes to a whole new level. We are currently expanding our teams in London and Singapore. If you're interested in *dialogue*, *language understanding*, *generation* or *reinforcement learning*, **get in touch.**

poly-ai.com

Deep Learning for NLP
Robust language understanding and rich response generation

Multilingual
Our models are polyglots, scaling across languages at near-zero cost

Task Agnostic
Our platform is the same for any application, improving as it scales across different tasks and domains

High-Quality Data
On-demand data collection with a proprietary crowdsourcing platform
